

Mental Health of University Students in the Digital Age

What is Mental Health?

**Emotional
Psychological
Social Well-Being**

*The foundation of how we
think, feel, and function.*

The Perfect Storm Facing Students

Academic Pressure

Constant exams, deadlines, and performance benchmarks create relentless cognitive load.

Digital Overload

Smartphones and social media blur the line between rest and stimulation — 24/7.

Social & Financial Stress

Isolation, career uncertainty, and rising costs compound emotional vulnerability.

Why This Matters to Society

Mental health is the defining public health crisis of our generation — and universities are ground zero.

35%

of students

show symptoms of anxiety or depression

2×

higher dropout risk

for students with untreated mental illness

\$1T

lost annually

to poor mental health in global productivity
(WHO)

If left unaddressed, poor student mental health leads to:

- Lower academic performance & higher dropout rates
- Rising healthcare & social welfare costs
- A generation less equipped to contribute to society
- Compounding inequality — vulnerable students suffer most

My Research Lens

Does excessive social media use increase anxiety?

Platforms engineered for engagement rewire reward pathways. Students check phones 96× per day on average.

Does lack of sleep degrade academic performance?

60% of students are chronically sleep-deprived. Blue-light and late scrolling are major drivers.

Can healthy digital habits improve well-being?

Screen-time boundaries, digital detox, and mindfulness apps show promise — but the data tells the real story.

What actionable insights can data science reveal?

Clustering, regression, and correlation analysis can surface student risk profiles for early intervention.

Why Every Student Should Care

What You Will Learn

- How your lifestyle choices shape your mental state daily
- Why sleep is the single most impactful well-being variable
- How to use technology without letting it use you
- What universities can do — and what you can demand from them
- Data-backed strategies to lower stress and raise performance

“Your phone, your sleep, your study habits — they’re all connected. And the data proves it.”

Real-World Impact

Insights from this research can directly inform:

- University counseling programs
- Student wellness app design
- Academic scheduling & workload policy

RESEARCH QUESTION

"How does daily social media usage influence the mental health and academic performance of university students?"

Variables Under Investigation

Social Media Hours/Day

Stress & Anxiety Score

Sleep Duration

Academic GPA

Study Hours/Day

Self-Reported Well-Being

From Broad Topic to Precise Research

BROAD TOPIC

Mental Health of University Students

A global issue affecting millions — but too wide to study meaningfully in one project.

FOCUSED AREA

Digital Technology & Student Well-Being

Zeroing in on how screens, platforms, and devices interact with mental health outcomes.

RESEARCH QUESTION

Social Media Use -> Mental Health + Academic Performance

A specific, measurable relationship we can test with real data and statistical methods.

Data Sources & Research Foundation
